

What's anti slip glass?

Anti slip glass is widely used in glass staircases,glass steps,glass floors.

The glass is usually made by **acid etching process** on glass surface to create uneven patterns,such as acid etched dots,acid etched cross.The patterns increase the friction and prevent potential slip when glass is wet.

© Anti-slip: The anti-slip layer on the glass surface has high friction, which provides a guarantee for the anti-slip performance of the glass floor.

© Transparency: The glass floor after anti-slip treatment still maintains the permeability characteristics, completely achieving unobstructed and visual integration of the line of sight.

© Safety: The anti-slip glass floor substrate has high strength and can withstand large loads without breaking. The anti-slip glass floor through the **laminating process** can withstand larger loads.

© The anti-slip layer does not fall off: The anti-slip layer is part of the glass, so it can be rubbed for a long time without falling off.

QINGDAO MORN BUILDING MATERIALS CO.,LTD

Your turnkey China tempered glass/laminated glass/insulated glass supplier

Use Cafés, stage, showrooms, KTV song and dance venues, supermarkets, large shopping malls, museums, landscape corridors, etc. need to be non-slip.

Morn can supply all kinds of anti slip glass for your glass staircase,glass floor,glass steps,welcome contact us for more info.
